                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ATP-binding cassette; antibiotic; vaccine; infection; therapy; poxvirus;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    for preventing or treating Chlamydia infection e.g. infection caused by C. trachomatis, C. psittaci, C. pneumoniae or C. pecorum in mammals, such as humans. The nucleic acid molecules are useful for producing ATP-binding cassettes, in the construction of vaccine vectors such chlamydia infection and in the construction of attenuated Chlamydia strains that can over-express the nucleic acid molecules or express strains that can over-express the nucleic acid molecules or express chlamydia pneumoniae ATP-binding cassette.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       present invention relates to novel Chlamydia pneumoniae ATP-binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cassette protein and its corresponding gene. Sequences of the invention are useful for detecting Chlamydia infection by assaying a body fluid of a mammal with the components. They are also used as vaccines. ATP binding cassette antibodies and vaccines of the invention are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel Chlamydia ATP-binding cassette and corresponding DNA molecule f

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            245330
                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents the complete genome of Chlamydia pneumoniae, and encodes proteins AAY3584-Y35879. C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent otitis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see Vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions as vaccines. Used as immunogenic compositions, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 1230025 BP; 367213 A; 249833 C; 249013 G; 363589 T; 377 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents the complete genome of Chlamydia trachomatis. Open reading frames (ORFS) of the genome encode polypeptides AAY36754-Y37949. The polypeptides can be used as vaccines against Chlamydia trachomatis. Antisense and ribozyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye diseases such as conventional trachoma, nonendemic trachoma, paratrachoma, and inclusion conjunctivitis; genital diseases such as nongonococcal uretritis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Vaccine; eye disease; conventional trachoma; nonendemic trachoma; paratrachoma; inclusion conjunctivitis; genital disease; perihepatitis; nongonococcal uretritis; epidymitis; cervicitis; salpingitis; bartholinitis; pneumopathy; venereal lymphogranulomatosis; ss.

The present invention relates to the isolation of Chlamydophila pneumoniae strain CWL029 genes and their encoded proteins. The genes of the invention encode an ATP binding cassette gene, a secretary locus open reading frame (ORF), an endopeptidase, a protease, a protease, in the invention ansaty and a CLP protease ATPase, a CLP protease submit, a genes of the invention can be used in a vector as a vaccine for the prevention and treatment of Chlamydia infections. Also described are B- and T-cell epitopes from the proteins of the invention which can be used as Chlamydia antigens. AASI8750-AASI8759 represent the C. pneumoniae
                                                                                                                                                                                                                               ATP binding cassette; secretary locus open reading frame; endopeptidase; secretary locus ORF; protease; metalloprotease; CLP protease AfPase; CLP protease subunit; transglycolase/transpeptidase; CLPc protease; thioredoxin; Chlamydia infection; antibacterial; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Vaccine useful for immunising mammals against chlamydia infections, comprises vectors having sequences of ATP binding cassette gene, secretary locus open reading frame gene of chlamydia
                                                                                                                                                                                                Chlamydophila pneumoniae gene encoding an ATP-binding cassette.

The opp operon of Bacillus (also known as spook operon) encodes an oligopeptide permease that is required for the initiation of sporulation and the development of genetic competence. The opp operon is a member of import or export of Oligopeptides from 3-5 amino acids. Bacillus strains containing a mutation in the opp operon produce more recombinant protein than the wild-type strain. Therefore, gram-positive microorganians, genes of the opp operon can be used for heterologous protein production, genes of the opp operon can be used for heterologous protein production, growth factors or cytokines. This sequence encodes a Borrelia burgdorferi (Bb) protein of the invention, which is suitable for use in a vaccine. The Bb polypeptides can be used in vaccines for eliciting protective antibodies to members of the Borrelia genus, particularly for the use against Lyme disease in humans and animals. They can be used for preventing or attenuating an infection caused by a member of the Borrelia genus. The products can also be used for detection of members of the Borrelia genus. New isolated Borrelia burgdorferi nucleic acids - used to develop products for the diagnosis, prevention and treatment of diseases caused by Borrelia, particularly Lyme disease

Claim 1; Page 182; 275pp; English

This sequence encodes a Borrelia burgdorferi (Bb) protein of the invention, which is suitable for use in a vaccine. The Bb polypeptides can be used in vaccines for eliciting protective antibodies to members of the Borrelia genus, particularly for the use against Lyme disease in humans and animals. They can be used for preventing or attenuating an infection caused by a member of the Borrelia genus. The products can also be used for detection of members of the Borrelia genus.

Sequence 1587 BP; 648 A; 251 C; 259 G; 429 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAX20248 to AAX20402 represent polynucleotide sequences isolated from Borrelia burgdorferi (Bb). Products derived from Bb can be used for the detection, diagnosis, characterisation, prevention and therapy of productions, e.g. Lyme disease. They can also be used for the production of biosynthetic products, e.g. enzymes. Borrelia belongs to a family of motile, spiral-shaped bacteria called Spirochetes. Spirochetes are pathogenic in humans and Borrelia causes epidemic and endemic relapsing fever, and Lyme borreliosis, more commonly known as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 910715 BP; 327171 A; 129646 C; 130753 G; 323091 T; 54 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated Borrelia burgdorferi nucleic acids - used to develop products for the detection, diagnosis, characterisation, prevention and therapy of infections, particularly Lyme disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   573940 TAATGTCGCATCAAAATGATTGACACAATGTTTAGAGGGATTGTTACAG 573891

The present sequence represents a gene isolated from Enterococcus faecalis. The present invention describes genes, proteins and antigenic polypeptides isolated from E. faecalis. The proteins can be used in vaccines for preventing or attenuating an infection caused used for detecting Enterococcus genus in an animal. They can also be sequences can be used for detecting Enterococcus antibodies in a sample. The nucleotide sequences can be used for detecting Enterococcus nucleic acids. Products from the present invention can also be used for screening compounds to identify agonists and antagonists of E. faecalis protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Enterococcus faecalis; infection; vaccine; immune response; diagnosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated Enterococcus faecalis polynucleotides - used to develop products for the detection of Enterococcus and for use in vaccines for prevention or attenuation of Enterococcus infection

982 nuclectide sequences isolated from the Enterococcus faecalis genome. AAX12938 to AAX13919 represent these nuclectide sequences which are primary nuclectide sequences, also known as contigs. The computer-based system can identify fragments of the Enterococcus faecalis genome with commercial importance. The products can be used to detect the presence of Enterococcus faecalis in samples. They can also be used for diagnosing Enterococcal infection in an animal and monitoring progression of disease, and for identifying agents which can be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A computer readable medium has been developed which has recorded on it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis nucleotide sequences can be used in vaccines to prevent or attenuate an Enterococcal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated Enterococcus faecalis polynucleotides and polypeptides - used to develop products for the detection of Enterococcus and for use in vaccines for prevention or attenuation of Enterococcus
                                                                                                                                                                                        Enterococcus faecalis; contig; detection; Enterococcal infection; vaccine; attenuation; computer readable medium; ds.

```
The present sequence encodes an antigenic polypeptide fragment isolated from Enterococcus faecalis. The present invention describes genes, proteins and antigenic polypeptides isolated from E. faecalis. The proteins can be used in vaccines for preventing or attenuating an infection caused by a member of the Enterococcus genus in an animal. They can also be used for detecting Enterococcus antibodies in a sample. The nuclectide sequences can be used for detecting Enterococcus nucleic acids. Products from the present invention can also be used for screening compounds to identify agonists and antagonists of E. faecalis
                                                                                                                                                                                                                                                                                                           New isolated Enterococcus faecalis polynucleotides - used to develop products for the detection of Enterococcus and for use in vaccines for prevention or attenuation of Enterococcus infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  55 TGAACAAAAATCAGTATTAQTTCACCTGCACCAATCTCAACATTGGATA 104

Products derived from Bb can be used for the detection, diagnosis, characterisation, prevention and therapy of Bb infections, e.g. Lyme disease. They can also be used for the production of biosynthetic products, e.g. enzymes. Borrelia belongs

```

A computer readable medium has been developed which has recorded on it 982 nucleotide sequences isolated from the Enterococcus faecalis genome. AAX1293 to AAX1293 perseent these nucleotide sequences which are primary nucleotide sequences, also known as contigs. The computer-based system can identify fragments of the Enterococcus faecalis genome with commercial importance. The products can be used to detect the presence diagnosing Enterococcus faecalis in samples. They can also be used for diagnosing Enterococcus infection in an animal and monitoring progression of disease, and for identifying agents which can be used to another related organism, in vivo or in vitro. In particular the products of the Enterococcus faecalis, or can be used in vaccines to prevent or attenuate an Enterococcal infection.

Identifying compounds that modulate a newly identified mar regulated polypeptide activity, useful as antimicrobial compounds, involves contacting the polypeptide with a test compound -

Disclosure; Page 170-177; 526pp; English.

The invention relates to a method of identifying compounds that modulate a newly identified mar regulated (NIMR) polypeptide activity. The method comprises contacting an NIMR polypeptide with a test compound under interaction conditions, determining the ability of the compound to modulate the activity or expression of the polypeptide, and selecting the of microbial infections, and in screening for modulators of NIMR compound activity. These modulators can be used to reduce the expression and activity. These modulators can be used to reduce the infectivity of a microbe on a surface, and the virulence of a microbe in Escherichia coli NIMR coding sequences of the invention.

The present sequence is the genome sequence of Listeria monocytogenes

Descriptions and primers for detecting sense in L. monocytogenes and related organisms, and primers for detecting genes in L. monocytogenes and Primers for detecting genes in L. monocytogenes and C. related organisms, and to study genetic polymorphisms and other genomes. The second for raising specific antibodies, identification of L. monocytogenes and related organisms, and for Liosynthesis and L. monocytogenes and related organisms, and for Liosynthesis and C. biodegradation, especially biosynthesis of Vitamin B12. This sequence and C. regulate gene expression and cell replication and modulate L. monocytogenes related diseases. In addition, this sequence and proteins concorded by it are useful in pharmaceutical and vaccines compositions for convanisms. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO Claim 1; SEQ ID No 1; 192pp; French.

Sequence 2944528 BP; 914202 A; 563301 C; 555061 G; 911964 T; 0 other;
